

The Future of Industrial Resin Flooring

## Tough Floors for Tough Jobs

High performance screed flooring systems developed by Resdev to meet the tough operational demands of manufacturing industry have been installed at the Chassis Systems site in Telford, providing a robust and attractive solution capable of withstanding hostile conditions in production and industrial wash areas.

When Chassis Systems were seeking to upgrade the area used for the manufacture of the T5 Chassis for Land Rover, they turned to industrial flooring installation specialists Protective Surface Coatings of Kidderminster for a hard wearing, cost effective solution.

They recommended Pumadur RT, Resdev's heavy duty, aggregate-filled polyurethane screed flooring to achieve the highest levels of durability, combining excellent chemical resistance with a surface profile conferring good slip resistance even in wet process areas. The matt surface is totally impervious and is therefore suitable for steam cleaning as well as being proof against steel wheeled traffic, impact and abrasion.

The project involved planing off the existing failed pump screed to expose the concrete subfloor and laying two coats of damp proof membrane, before installing the Resdev materials at a nominal 6mm depth, with up to 8mm in areas dependent upon the profile of the floor.

When the project was complete, Protective Surface Coatings then used Resdev's Pumatect materials to lay walkways in Safety Yellow with white edging lines.

Although the required timeframe for the entire project was tight, requiring completion, cure and commissioning within a two-week window during the scheduled works shutdown period, the task was finished on time, on schedule and to the satisfaction of Chassis Systems.
