

The Future of Industrial Resin Flooring

# Pumabulk solves level problem at British Salt

Before

After

Contracting specialists Impact Flooring Services Limited, together with industrial flooring manufacturers Resdev Limited, recently used polyurethane resin flooring technology to provide a long term solution to handle the aggressive conditions in the plant at British Salt's production facility in Middlewich.

British Salt was looking to carry out improvement works to flooring in the primary purification area, where high concentrations of salt in the atmosphere had led to some levels of flooring degradation.

Following extensive surface preparation including floor planing and digging out sections of the concrete slab damaged by salt, Impact Flooring applied Resdev's Pumabulk, a polyurethane resin reinforced with graded silica sands specifically developed as an infill for flooring surfaces prior to application of the final flooring system.

Impact Flooring Services then applied Resdev's Pumadur HF heavy duty polyurethane flooring system at 9mm to give an impervious system stable to steam cleaning processes.
